# RedKross Research Foundation

Main Website — Architecture, Content, UX and Developer Handover

| | |
|---|---|
| Target domain | https://redkross.org.in |
| Document purpose | Build the parent foundation website and define its content ownership across Cybersecurity and Psychology. |
| Version | Developer handover specification · Draft 1.0 |
| Date | 24 October 2026 |

**Prepared for the developer building the two new RedKross websites. The developer should audit the supplied source folder and verify all live content before migration or publication.**

Important: This document defines the target experience and content. It does not authorise production server changes, DNS changes or publication of unverified claims.

# 1. Executive brief

Build a complete institutional website for RedKross Research Foundation. The main domain is the central home for the organisation's identity, mission, both pillars, foundation-wide research, innovation, partnerships, opportunities, governance, impact and contact information.

**The main website must not become a thin landing page or duplicate all specialist content. It should explain the organisation, give equal prominence to Cybersecurity & Technology and Psychology & Human Wellbeing, and route visitors to the appropriate specialist website.**

| Website | Role | Status / boundary |
|---|---|---|
| Main: redkross.org.in | Foundation identity, shared research, governance, partnerships and all-domain opportunity discovery. | Build in this project. |
| Cyber: cyber.redkross.org.in | Technical cybersecurity research, projects, labs, Academy, technical resources and cyber opportunities. | Separate project; see companion specification. |
| Psychology: psychology.redkross.org.in | Psychology services, counselling journeys, psychology research, training and psychology-specific opportunities. | Existing site; do not rebuild or disrupt in this phase. |

Hostname note: cyber.redkross.org.in is the proposed hostname. Confirm it before finalising links, canonical metadata and redirects.

# 2. Project goals and audiences

- Explain clearly what RedKross Research Foundation is, why it exists and how its two pillars fit together.
- Create a credible, accessible institutional presence for students, researchers, colleges, universities, collaborators and community organisations.
- Make genuine opportunities discoverable without inventing vacancies or duplicating application forms.
- Show real projects, research outputs and impact only where supported by verified evidence.
- Support college and university partnerships, including cybersecurity training and mentored project development.
- Create a maintainable content structure and deliver a project folder ready for a separate deployment phase.

Primary audiences: students and interns; colleges and universities; researchers and academic partners; technical organisations; psychology-service visitors; community organisations; prospective volunteers and collaborators.

# 3. Information architecture and sitemap

Recommended top-level navigation: Home · About Us · Our Pillars · Research & Innovation · Opportunities · Partner With Us · Governance & Trust · News & Insights · Contact.

Use dropdown navigation where needed. On mobile, use an accessible navigation drawer. Do not place every subpage in the top-level header.

| Route | Purpose / required content |
|---|---|
| / | Homepage; foundation identity, equal pillar cards, research, opportunities, governance and collaboration calls to action. |
| /about | Who RedKross is, mission, vision, values, organisational identity and how it works. |
| /about/mission-and-vision | Expanded mission, vision and operating principles. |
| /about/team | Verified leadership and team profiles only; names, roles and biographies must be approved. |
| /pillars | Overview and comparison of Cybersecurity & Technology and Psychology & Human Wellbeing. |

| Route | Purpose / required content |
|---|---|
| /pillars/cybersecurity | High-level cybersecurity summary and link to the dedicated cyber website. |
| /pillars/psychology | High-level psychology summary and link to the existing psychology website. |
| /research | Foundation-wide research overview, themes, methodology and cross-disciplinary work. |
| /research/areas | Shared research themes; technical details belong on Cyber and psychology details on Psychology. |
| /research/methodology | Research approach, transparency, limitations, appropriate review and reproducibility. |
| /research/publications | Foundation-wide publication index; only verified outputs. |
| /innovation | How research ideas are explored, prototyped, evaluated and communicated. |
| /projects | Selected cross-foundation project highlights with domain labels and canonical links. |
| /opportunities | Unified directory and filters for all domains; canonical application destination for each item. |
| /opportunities/[slug] | Reusable opportunity detail template where main-domain ownership is appropriate. |
| /partners | Institutional collaboration, college and university tie-ups, partner enquiry. |
| /partners/college-university | Dedicated college collaboration proposition and enquiry flow; may be a section of /partners if content remains concise. |
| /impact | Verified outputs, outcomes and impact reporting; no invented statistics. |
| /governance | Governance, ethics, privacy, safeguarding, accountability and policy index. |
| /governance/ethics | Research ethics and human-participant principles. |
| /governance/privacy | Privacy and data-handling information or approved policy link. |
| /governance/safeguarding | Safeguarding principles and escalation route, once approved. |
| /news | Foundation announcements and updates. |
| /contact | General enquiries, partnerships and routing to the relevant pillar. |

# 4. Homepage — section order and content

Build the homepage in the following order. Keep it concise, visual and credible; detailed policies, project documentation and long opportunity descriptions belong on their own pages.

| Order | Section | Required elements |
|---|---|---|
| 1 | Hero | Headline; short foundation description; primary CTA Explore Our Research; secondary CTA Discover Our Pillars. |
| 2 | About RedKross | Short identity, mission and cross-disciplinary positioning; link to About. |
| 3 | Two pillars | Two equal cards. Cybersecurity & Technology links to cyber subdomain; Psychology & Human Wellbeing links to psychology.redkross.org.in. |
| 4 | Research & innovation | Research approach, selected verified projects and cross-pillar work; link to Research and Innovation. |
| 5 | Featured projects | Real projects only; domain, status, one-line summary and canonical destination. |
| 6 | Opportunities | Small selection of genuinely open opportunities from both pillars; link to full directory. |
| 7 | Partner with us | College/university partnerships, research collaboration, community and institutional partnerships. |

| Order | Section | Required elements |
|---|---|---|
| 8 | Governance & trust | Ethics, privacy, responsible research, safeguarding and accountability links. |
| 9 | Impact / updates | Verifiable outcomes, announcements or latest updates; hide section if no approved content. |
| 10 | Footer | Both pillar links, governance, contact, verified social links and approved copyright wording. |

## 5. Homepage — proposed copy for implementation

### Hero Research for a Safer, More Resilient World.

RedKross Research Foundation brings together cybersecurity, artificial intelligence and psychology to explore real-world challenges, develop practical solutions and support responsible innovation.

Through research, technical projects, education and community-focused initiatives, we aim to make knowledge more accessible and useful.

Primary CTA: Explore Our Research<br/>Secondary CTA: Discover Our Pillars

### About RedKross Research with Purpose. Innovation with Responsibility.

RedKross Research Foundation is a research, education and innovation organisation working across technology and human wellbeing. We connect technical investigation with human-centred thinking to explore how research can address practical problems.

Our work brings together cybersecurity, AI, digital forensics, behavioural research and psychology, with an emphasis on responsible practice, collaboration and meaningful outcomes.

### Our Pillars Two Pillars. One Shared Mission.

Cybersecurity & Technology<br/>We explore digital security, AI-enabled technologies, digital forensics and security engineering through research, practical projects and technical collaboration.<br/>CTA: Explore Cybersecurity

Psychology & Human Wellbeing<br/>We support psychology education, mental wellbeing initiatives, behavioural research and community-focused programmes through our dedicated Psychology platform.<br/>CTA: Explore Psychology

### Research & Innovation From Questions to Evidence.

We believe useful research starts with a clearly defined problem. Our approach emphasises structured investigation, appropriate methods, transparent limitations and the responsible communication of findings.

### Opportunities Find Your Place in the Work.

Explore opportunities across cybersecurity, AI, digital forensics, psychology and interdisciplinary research. Depending on availability, these may include internships, research participation, technical collaboration, volunteering and community programmes.

Every opportunity should clearly explain its eligibility, current status and application route.

### Governance Trust Is Part of the Research.

We aim to approach research and innovation with integrity, respect for privacy, appropriate ethical oversight and clear accountability. Responsible practice must shape how projects are designed, conducted and communicated.

### Final CTA Explore. Collaborate. Contribute.

Whether you are a student, researcher, technical contributor or organisation, discover how your interests connect with RedKross Research Foundation.

# 6. About page — proposed copy

Page: /about

### Who We Are

RedKross Research Foundation is a research, education and innovation organisation working across cybersecurity, artificial intelligence, digital forensics and psychology. We bring together technical investigation and human-centred perspectives to explore real-world challenges, support responsible innovation and make research more accessible to students, researchers and communities.

### Our Mission

To connect research, education and innovation with practical challenges in digital security and human wellbeing, while encouraging responsible, evidence-informed and collaborative work.

### Our Vision

A safer, more digitally resilient and psychologically informed society supported by accessible knowledge, responsible technology and meaningful research.

### Our Values

- Integrity — communicate findings honestly and acknowledge limitations.
- Rigour — use appropriate methods, evidence and review.
- Accessibility — make knowledge and opportunities easier to discover and understand.
- Responsibility — consider privacy, ethics, safety and potential harm.
- Collaboration — encourage constructive contributions from students, researchers and institutions.
- Impact — focus on useful outcomes rather than unsupported claims.

**Do not add legal status, history, leadership credentials or organisational claims unless verified and approved by the foundation.**

# 7. Pillars page — proposed copy

Page: /pillars

## Two Pillars. One Foundation.

RedKross Research Foundation brings together two areas of work that address different but interconnected challenges: the security of digital systems and the wellbeing of people.

### Cybersecurity & Technology

Our cybersecurity pillar focuses on digital security, artificial intelligence, digital forensics, security engineering and technical research. The work includes developing and documenting projects, exploring defensive and offensive security concepts in authorised environments, and investigating how technology can support safer digital systems.

CTA: Explore the dedicated Cybersecurity website.

### Psychology & Human Wellbeing

Our Psychology pillar focuses on psychology education, mental wellbeing, behavioural research, community initiatives and related programmes. It provides a dedicated destination for psychology-specific information, services and opportunities, with appropriate attention to confidentiality, professional boundaries and responsible practice.

CTA: Explore the existing Psychology website.

### Where the Pillars Connect

Cybersecurity and psychology can inform one another through research into human behaviour, online trust, social engineering, security awareness and digital wellbeing. Interdisciplinary work must be supported by appropriate methods, safeguards and collaboration.

# 8. Research and innovation pages

## /research — proposed copy

Research begins with questions that matter. At RedKross Research Foundation, we aim to investigate technical and human-centred challenges through structured methods, responsible data practices and transparent communication.

Our areas of interest include cybersecurity, artificial intelligence, digital forensics, human-centred security and applied psychology. The scope and maturity of individual projects vary. Each project should clearly describe its research question, methods, current status and limitations.

Our research approach: define a question; review existing evidence; select suitable methods; address ethics, privacy and safety; conduct and document the work; evaluate results and limitations; communicate findings responsibly.

## /innovation — proposed copy

Innovation connects research questions with practical experimentation and useful outcomes. We explore how technical development, applied research and collaboration can help address problems in cybersecurity, artificial intelligence and related areas.

Each project should communicate what is implemented, what has been tested and what remains incomplete. A prototype must not be presented as a validated or production-ready system without supporting evidence.

# 9. Opportunities directory — requirements and copy

Page: /opportunities

Proposed introduction: RedKross Research Foundation brings together people interested in research, technology, psychology and community-focused work. Depending on programme availability, opportunities may include internships, research participation, technical contributions, volunteering and institutional collaboration.

**Required filters:**

- Domain: All; Cybersecurity & Technology; Psychology & Human Wellbeing; Cross-disciplinary Research.
- Type: Internship; Research role/participation; Volunteering/community; Technical contribution; Partnership.
- Status: Open; Upcoming; Interest registration; Closed; Planned.
- Optional filters: location/delivery mode, eligibility, deadline.

**Every opportunity record must have one canonical destination. The main website may summarise a cyber opportunity, but its full technical description and application route should live on the cybersecurity site. Psychology services and psychology-specific applications remain on the Psychology site.**

| Status | Meaning / behaviour |
|---|---|
| Open | Applications are being accepted. Show eligibility, dates and application action. |
| Upcoming | Confirmed future opportunity. Show opening date only if confirmed. |
| Interest registration | Not yet accepting applications; show a form only if a real process exists. |
| Closed | Remove application CTA; retain archive only if useful. |
| Planned | Not launched. Do not imply enrolment or participation is available. |

# 10. College & University Partnerships

Primary page: /partners. A separate /partners/college-university page is recommended if the section becomes extensive.

### Proposed section heading: Bridging Academic Learning and Real-World Cybersecurity

RedKross Research Foundation welcomes collaborations with colleges and universities that want to prepare students for practical technology projects and entry-level cybersecurity work. Through structured training, guided projects and collaborative learning, we aim to help students develop the technical foundations, problem-solving skills and project-level thinking needed to progress beyond classroom theory.

#### Collaboration themes

- Cybersecurity foundation training: networking, Linux, security principles, common threats and defensive practices.
- Project-level thinking: identify a problem, review existing work, define requirements, plan architecture, divide tasks, build prototypes, test and document.
- Cybersecurity trainee development: introductory security assessment, vulnerability management, log analysis and incident-response concepts within authorised labs.
- Mentored team projects: project briefs, version control, collaboration, technical reviews, testing and demonstrations.
- Project documentation and evaluation: technical reports, design decisions, evidence, limitations and presentations.

#### Proposed delivery stages

1. Institutional consultation — understand courses, student year groups, hours, outcomes and constraints.
2. Foundational training — teach cybersecurity basics, Linux, networking, research skills and safe lab practices.
3. Project planning — define problem statements, requirements, milestones, team roles and testing strategies.
4. Guided implementation — supervised work on approved projects in controlled environments.
5. Evaluation and presentation — demonstrations, documentation, feedback and agreed assessment.

Formats may include workshops, short training programmes, semester-linked projects, faculty-supported mentoring and longer collaborations. Duration, fees, capacity, trainer availability and deliverables must be agreed individually.

Partnership CTA: Enquire About a College Tie-Up.

## 11. Partnership enquiry form

Create a real form on /partners. It should collect institutional information, not unnecessary student personal data.

- College or university name.
- Department/faculty and official contact person's name and role.
- Institutional email address.
- Approximate student count and student courses/year groups.
- Areas of interest: foundational training, project mentoring, workshops, research collaboration or semester-linked programmes.
- Preferred delivery: in-person, online or hybrid.
- Expected timeframe and additional requirements.
- Privacy notice and consent where appropriate.

**A successful confirmation message must only appear after the submission is actually accepted by the configured endpoint. If email/API delivery is not configured, mark the form as a dependency and do not simulate success.**

## 12. Governance, ethics and trust

The main site should provide the foundation-wide governance and policy index. Do not publish policy claims as adopted unless the foundation has approved them.

- Research ethics and review principles.
- Human-participant research, informed consent and appropriate safeguards.
- Privacy, data retention and responsible data handling.
- Safeguarding and escalation routes.
- Research quality, reproducibility and reporting.
- Complaints and accountability routes.
- Links to cybersecurity-specific responsible disclosure and technical safety guidance.

**Use approved policy documents or clearly label draft policies as not yet approved. Do not invent legal status, certifications or compliance claims.**

# 13. Design and UX requirements

- Institutional/editorial design: white space, navy, restrained blue accents and clear typography.
- Both pillar cards must receive equal visual weight.
- Shared brand system with the cybersecurity site: logo, typography, spacing, button patterns, footer and accessibility conventions.
- Use authentic, licensed imagery; avoid fake dashboard screenshots or misleading imagery that suggests unavailable services.
- Responsive at mobile, tablet and desktop breakpoints.
- Accessible keyboard navigation, visible focus states, semantic headings, labelled forms and appropriate alt text.
- Respect reduced-motion preferences and avoid unnecessary animation or trackers.
- Hide empty content sections instead of publishing placeholder copy.

# 14. Content ownership and migration map

| Existing content | New destination | Required action |
|---|---|---|
| Homepage and foundation intro | Main / | Rewrite as parent foundation story. |
| Mission, vision, values | Main /about | Preserve only verified facts; align wording. |
| Research areas | Main /research + Cyber /research | Shared overview on main; technical depth on Cyber. |
| Research labs | Cyber /labs | Move detailed lab content; status-check all items. |
| Projects/GitHub portfolio | Cyber /projects | Build detailed project catalogue with verified links. |
| Innovation Lab | Main /innovation and Cyber project pages | Separate philosophy from technical portfolio. |
| Academy roadmap | Cyber /academy/roadmap | Keep milestones and statuses accurate. |
| Cyber internships | Cyber /opportunities | Verify real status, eligibility and application route. |
| Psychology internships/services | Existing Psychology site | Preserve and link; do not duplicate forms. |
| Ethics/privacy | Main /governance | Centralise shared policies; link from Cyber. |
| Responsible disclosure | Cyber /responsible-disclosure | Verify scope, address and process. |
| Foundation-wide opportunities | Main /opportunities | Build structured cross-domain directory. |
| Team/leadership | Main /about/team | Confirm names, roles, credentials and permission. |
| Publications | Main overview / Cyber /publications | Only verified outputs; distinguish papers from reports. |

# 15. Technical implementation requirements

- Two independently buildable applications; a monorepo/shared component library is acceptable if each app can be built and deployed independently.
- Inspect the supplied existing source folder before selecting or changing frameworks. Document actual framework and versions.
- Provide package manifest and lockfile, setup/build/start commands, README and .env.example with safe placeholders.
- Do not hardcode credentials, production secrets or private tokens.
- Use structured content for opportunities and projects to avoid duplicated status and URL information.
- Forms must have real endpoints and server-side validation where applicable.
- Do not add a database or CMS unless it materially helps the agreed requirements.
- Include metadata, canonical URL strategy, sitemap/robots configuration and legacy redirect map.
- No production DNS, Nginx, PM2, Cloudflare or server changes in this development phase.

# 16. Acceptance criteria

- Homepage communicates the entire foundation and both pillars equally.
- All agreed main-site routes are implemented and populated with approved or clearly flagged draft content.
- Cybersecurity and Psychology links point to the correct canonical destinations.
- College partnership section and functioning institutional enquiry flow are implemented.

- Opportunity directory filters work and every listing has a canonical application destination.
- Only verified people, projects, publications, statistics and opportunity statuses are published.
- Mobile, tablet and desktop layouts are tested.
- Keyboard navigation, focus states, image alternatives and form labels are checked.
- Production build succeeds from a clean setup; no critical console/build errors remain.
- All links, redirects, metadata and sitemap settings are checked.
- Documentation, test report, content migration map and approval-pending list are handed over.

# 17. Handover folder and developer workflow

### Suggested handover structure:

**redkross-website-handover/\n main-website/\n cybersecurity-website/\n documentation/page-inventory.md\n documentation/content-migration-map.md\n documentation/legacy-url-redirects.md\n documentation/testing-report.md\n documentation/deployment-notes.md\n HANDOVER.md**

Recommended workflow: (1) audit existing folder and live pages; (2) approve sitemap/content ownership; (3) design shared brand and two visual directions; (4) build main site; (5) build cybersecurity site; (6) test; (7) hand over both folders. Claude will handle a separate migration phase after approval.

# 18. Approval items before publication

- Confirm cyber.redkross.org.in as the final hostname.
- Verify all live opportunity statuses with programme owners; existing pages may contain different application-status claims.
- Verify each project repository, current capabilities, demo and maturity status.
- Approve foundation mission, vision, values, team profiles and legal/organisational details.
- Approve privacy, ethics, safeguarding and responsible-disclosure wording.
- Confirm contact addresses, form destination and who will maintain content.

Reference note: this specification uses the current RedKross site structure and the content allocation agreed for this project as its baseline. The developer must audit the supplied source folder and verify live facts before publishing. Proposed copy is not proof that a programme, policy or capability is operational.
