ORGANISATION PROFILE • OCTOBER 2026

RedKross Research Foundation

Background, origin, mission, research focus, organisational journey and team

Initiate. Innovate. Impact.

A research, education and innovation organisation working across cybersecurity, artificial intelligence, digital forensics and human-centred security, with an associated psychology and mental-wellbeing wing.

Public website: redkross.org.in

Founded / began

April 2026
Incorporated: 27 April 2026

Headquarters listed

Panipat, Haryana
India

Core approach

Applied research
Open collaboration
Real-world impact

Purpose of this document. This profile consolidates information available from RedKross's public website and public company information. It is an organisational overview—not a legal opinion, audited annual report or claim that every planned programme is already operational.

1. Who RedKross Is

A concise account of the organisation’s public identity and origin.

RedKross Research Foundation presents itself as a research, education and innovation organisation focused on using technical knowledge to address practical problems. Its published areas include cybersecurity, artificial intelligence, digital forensics and human-centred security. Through its associated psychology platform, the organisation also presents work related to psychology education, counselling and community mental wellbeing.

The foundation’s public positioning is built around the idea that research should be more than theory: it should be documented, tested, communicated clearly and—where appropriate—turned into usable tools or community-facing programmes. Its stated values include openness, rigour, accessibility and impact.

The backstory: why this kind of organisation

RedKross’s published narrative describes an organisation that began with a technology-research focus and a conviction that knowledge should serve people who need it. Its psychology platform describes the expansion into community mental wellbeing as a response to needs encountered among students and communities—particularly the need for accessible, stigma-free support. This is the organisation’s published account of its direction; a more detailed founder-origin story, including the first idea, founding conversation and early milestones, is not publicly documented in the sources reviewed for this profile.

Founding date: The foundation’s own website says it began in April 2026. Public company information lists the incorporation date as 27 April 2026. These are related but distinct milestones: the first describes the organisation’s stated beginning, while the second is its formal incorporation date.

The organisation in one sentence

> *RedKross aims to connect applied research, technology development, education and community benefit—especially where digital safety and human wellbeing intersect.*

2. Mission, Vision and Values

Mission

> *Bridge advanced research and accessible real-world products, and train the people who will build a safer digital world.*

Vision

> *A secure, digitally literate and mentally resilient society, defended by a generation of ethical researchers and builders.*

Guiding values

VALUE	WHAT IT MEANS
Openness	Share methods, tools and learning where appropriate; support collaboration and public repositories.
Rigour	Use structured methods, evidence, validation and clear documentation rather than unsupported claims.
Accessibility	Make research and learning more approachable, especially for students and underserved communities.
Impact	Work toward useful outputs and community benefit, while distinguishing ambitions from delivered outcomes.

VALUE	WHAT IT MEANS
Ethics and responsibility	Consider privacy, safety, responsible disclosure and dual-use risks in technical work.

3. Main Research and Impact Areas

The organisation’s work spans technical research and human-centred community impact.

Cybersecurity

Offensive and defensive security research, vulnerability research, detection engineering, security automation and practical digital safety.

Artificial Intelligence and AI Security

Applied machine learning and investigation of security issues affecting AI systems, including adversarial robustness and LLM security.

Digital Forensics

Reproducible methods for analysing network, memory, disk and malware-related evidence, with care for evidence integrity and documentation.

Human-Centred Security and Psychology

Study of security behaviour, cyberpsychology, social engineering, awareness and the way people respond to digital risks.

Research and Innovation

Develop and document projects, test ideas, validate outputs and publish useful repositories or technical material where appropriate.

Education and Community

Build a pathway for learners and collaborators through future structured programmes, training and community initiatives.

Important distinction: The website describes some areas as research priorities or programmes in development. The presence of a topic on the website does not mean a formal lab, course, publication or public service is already operating.

4. The Psychology and Mental-Wellbeing Wing

RedKross Psychology is presented as the foundation’s psychology and mental-wellbeing wing. Its public description includes professional counselling, psychology education, workshops, internship-related activity and community mental-health programmes. The stated philosophy is to make mental-wellbeing support more accessible and to address stigma around seeking help.

This wing gives RedKross a human-centred dimension alongside its technical work: digital risks affect people, behaviour and decision-making, while wellbeing programmes address a different but related community need. The psychology platform should be treated as the authoritative destination for its own services, eligibility, availability and professional details.

Public platform: psychology.redkross.org.in

5. Organisational Journey and Timeline

Milestones below are based on the foundation’s public roadmap and company information.

DATE / PERIOD	MILESTONE	SUMMARY
April 2026	**Foundation begins**	The public roadmap states that RedKross begins work as a research, education and innovation organisation.

DATE / PERIOD	MILESTONE	SUMMARY
27 April 2026	**Formal incorporation**	Public company-information listings report this as the date of incorporation.
10 June 2026	**Public GitHub organisation**	The website states that the Redkrossresearch GitHub organisation was established and public repositories began forming the engineering portfolio.
Q3 2026	**Research and platform foundations**	The roadmap describes development of programme structure, internship workflows, project infrastructure and governance foundations.
Q4 2026	**Academy and Cyber Range architecture**	These are described as in development/planned work; public courses and lab access are not yet available according to the roadmap.
2027 onward	**Longer-term expansion**	Planned ambitions include broader research programmes, fellowships, publications, partnerships, awareness and community impact. These are goals, not guarantees.

The public roadmap describes a developing organisation. It explicitly distinguishes what is available, what is in development, what is planned and what is not yet available. This profile preserves those distinctions.

6. Team and Leadership

Current leadership roles confirmed for this profile.

Harsh Rajput
Director

Ojas Satardekar
CEO

Upasna Solanki
Department Head

Atharva Gupta
Development Head

Team information

These names and titles are the current leadership details supplied for this profile. Piyush and Pallavi have been removed from the team listing. Biographies, qualifications, responsibilities and public profile links should be added only after confirmation.

Possible future functional structure (suggestion)

As RedKross grows, functional teams could cover Cybersecurity Research, AI and Security Engineering, Digital Forensics, Psychology, Research Ethics and Governance, Education, Partnerships and Operations. This is a proposed structure, not a claim that all departments currently exist.

7. Current Status: What Exists and What Is Still Developing

STATUS	PUBLICLY DESCRIBED POSITION
Publicly available	Public website; public GitHub repositories; published methodology, ethics and governance material; responsible-disclosure contact/process.
In development	Formal research programme; RedKross Academy architecture; Cyber Range foundations.
Planned / not yet available	Public courses and enrolment; Cyber Range lab access; CVE/CTF lab catalogue; fellowships; published research papers or datasets; technology-transfer services.

The roadmap gives a target of Q1 2027 for a possible initial Academy and Cyber Range launch, subject to quality assurance, security validation, capacity testing and operational readiness. This is a target, not a confirmed launch date.

8. Public Institutional Details

DETAIL	PUBLIC INFORMATION
Organisation name	RedKross Research Foundation

9. Legal Registration, Institutional Details and Sources

Legal status. RedKross Research Foundation confirms that it is a legally registered organisation and is registered on NGO Darpan. The foundation's public company-information listing reports the following corporate details. The NGO Darpan Unique ID should be inserted once supplied for this document.

DETAIL	PUBLIC INFORMATION
Organisation name	RedKross Research Foundation
Corporate Identification Number (CIN)	U85499HR2026NPL144741
Reported incorporation date	27 April 2026
Reported registrar	Registrar of Companies, Haryana
Reported company status	Active (according to public company-information listing)
NGO Darpan status	Registered — Darpan Unique ID: to be added
Website	https://redkross.org.in/
Publicly stated beginning	April 2026
Registered address listed	11219 Mahadev Colony, near Samsan Road / Saini Chakki, Panipat, Haryana 132103, India
Public contact listed	info@redkross.org.in · +91 73032 63719 (confirm mailbox and number before formal use)
Psychology platform	https://psychology.redkross.org.in/

Details to keep on file

Keep the incorporation certificate, memorandum/articles or other governing documents, and the NGO Darpan registration confirmation together. Use the exact legal form and registration wording shown on the official documents. NGO Darpan registration provides a unique identity on the NITI Aayog portal; it should not be described as a substitute for the underlying incorporation or registration certificate.

Other items to verify before external publication

- The complete origin story and earliest founding milestones, which are not fully documented publicly.
- Current project status, qualifications, programme availability and approved biographies.
- Current official email and telephone details.
